

Fluffy Slime

Ages 7-12 · 20-25 min · Small group

Learning intention

This experience supports children to hypothesise about cause-and-effect and to describe and compare what they observe.

You'll need

- $\frac{2}{3}$ cup white glue
- $\frac{1}{2}$ tsp baking powder
- $\frac{1}{4}$ cup water
- 2-3 cups shaving cream
- 1.5 tbsp contact lens solution
- Food colouring

How to do it

1. Combine the glue, water and baking powder in a bowl.
2. Fold in the shaving cream - the more you add, the fluffier the slime.
3. Add colouring, then stir in the contact lens solution a little at a time.
4. Knead until light and cloud-like. Compare the texture with classic slime.

Framework links

MTOP

- **4.2** Children and young people develop a range of learning and thinking skills and processes such as problem solving, inquiry, experimentation, hypothesising, researching and investigating
- **5.1** Children and young people interact verbally and non-verbally with others for a range of purposes

NQS

- **1.2.1** Intentional teaching - Educators are deliberate, purposeful, and thoughtful in their decisions and actions.
